AGO's All Lines Policy System on the web (PSWeb)

Get the best Property & Casualty Policy System for the money and be the envy of the neighborhood.

Deloitte recently released a report stating:
"Even though the economic recovery is slow and sporadic, property and casualty insurers are poised for top-line growth this year. Unable to depend on investment income due to low interest rates and a volatile securities market, carriers have been paying closer attention to underwriting, often with support of new and improved predictive analytics and raising prices for coverage accordingly."
Is your Policy Administration system geared for the undertaking?
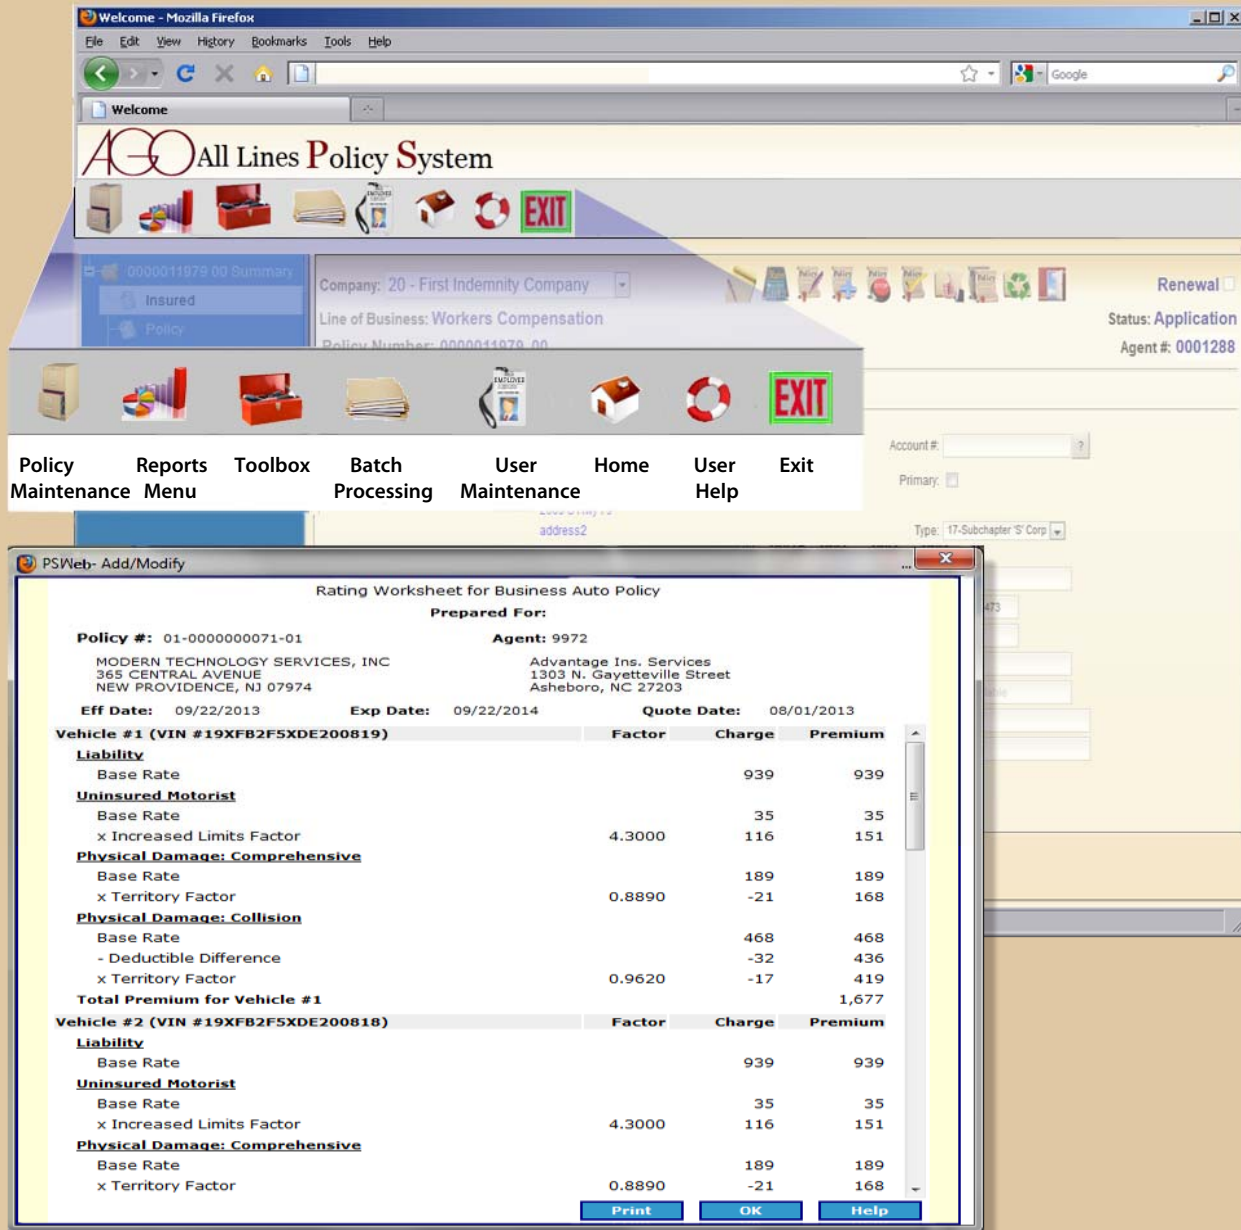

AGO's All Lines Policy System on the Web (PSWeb) is designed to give you what you need in this ever-changing industry. Now, with Predictive Analytics and Business Intelligence, we also provide you with important features to save you time while you focus on the most important thing, profit.

Our single-entry system with real time online processing can receive applications, change request, audits and more via internet from your agents and customers. PSWeb brings the internet into policy administration software, making the system more streamlined and convenient to use. Flexibility enables implementation to be designed around users' workflow while strong security ensures data integrity.

If your current Policy Administration System has large vacancies in its skill set, then it's time to welcome AGO to the neighborhood.

AGO
Insurance Software, Inc.

AGO's All Lines Policy System on the Web (PSWeb) is a comprehensive browser-based component in the suite of AGO Policy Processing Systems. This system enables your users to enter applications, rate, track and administer your Property & Casualty book of business via a browser-based interface. PSWeb can be used stand-alone or as part of a complete AGO insurance platform or integrated with your current In-house or third party software.

Application Processing
- Application Entry/Revision - Via Web browser
- Expert Underwriting
- MVR report requests
- Quoting (up to 27 versions can be stored for any application)
